

Control Bleeding. Save Lives.

CELOX-A Saves Soldiers Lives In Afghanistan

FIELD REPORT.

The Celox applicator that I used was very easy. I actually primed the end of the barrel a little to make sure that it was not clogged. I inserted it about 2 inches into the wound and inserted all of its contents without any problems in about 1 second.

The wound was a blast injury with some major distal bleeding. The laceration was about 7 inches in length and full thickness to the bone with major cavitation.

One of the distal vessels in the leg was bleeding very badly and when I saw him he had on a tourniquet. The Celox was introduced with a bandage and the tourniquet was removed. There was no further bleeding from the wound.

This was my first time using the new applicator and as I expected, it worked amazingly. The tube filled the wound deep and directly where I needed the Celox. Of course the Celox did an amazing job getting the bleeding under control and made the patient more stable, manageable and was a life saving intervention.'

Special Forces Medic

Celox-A™, the new revolutionary life saving haemostat for penetrating wounds such as bullet, shrapnel and knife wounds is now being used in Afghanistan and saving troops lives..

MedTrade, Crewe, UK is proud to announce that Celox-A has been put to work in Afghanistan and has already saved at least two lives. See the field report in left hand panel.

Celox™, rapidly controls moderate to severe bleeding from arterial wounds within minutes of application by attracting red blood cells to its surface and forming a strong gel plug which seals the wound.

Since its introduction to the US market in 2006 Celox's™ ability to rapidly clot blood has made it the haemostat of choice for many US military, police, fire and ambulance medics. Celox™ has been demonstrated to rapidly and reliably stop major bleeding in major wounds. It works independently of temperature and the bodies own blood clotting mechanisms. It is also able to clot blood in the presence of anti-coagulants such as Heparin and Coumadin.

Now Celox-A (applicator) has taken the product a technology a leap forward making it possible to treat wounds which have a small entry hole and a deep tract. Such wounds are all too common and can be caused by bullets, knives, shrapnel or result from any other penetrating trauma.

Craig Hardy, CEO of MedTrade, said “ Celox-A™ has received an outstanding reception following its introduction to the USA in February 2008. It We are therefore thrilled to see the product being used in action and saving the lives of our soldiers from previously untreatable wounds”.

Celox-A™ was honoured with a top Innovation Award by EMS magazine.

More details on Celox™ technology can be found on www.celoxmedical.com or by e-mailing web@medtradeproducts.co.uk.

Celox™ and Celox-A™ are distributed to the Military & Emergency Services by:

- USA & rest of the world.... Sam Medical, USA, (www.sammedical.com).
- UK.....Milsys (UK) Ltd, (www.milsys.co.uk).

Celox™ was developed and is manufactured by MedTrade Products Ltd. It will distributed to all other markets by MedTrade Products Ltd, Crewe, UK.
