

CELOX™

INDUSTRIAL

Workplace safety technology leaps forward.

When accidents happen professional help may be only seconds away for some but for many its a lot longer. Now you can take control and be well prepared to protect your colleagues & yourself.

Severe bleeding can put you in shock, damaging organs and tissues quickly. It can kill in less than 10 minutes. When bad accidents happen you need to act fast to stop the bleeding.

To help you, we are proud to launch a new version of CELOX, for use in personal and workplace situations, where you can now be prepared.

CELOX was originally developed to save lives on the battlefield. After receiving US approval, it was launched to the US Military and Emergency Responders in late 2006. It has been well received by the medics who deal with some of the worst wounds imaginable.

CELOX's new technology is proven to clot blood in just 30 seconds.

The new CELOX Industrial 12g & 25g packs are ideal for use within the industries such as mining, oil, construction, food, fishing, freight (truck, air and sea), manufacturing, as well as for your own personal preparedness.

CELOX is packed in robust, light weight and pocket sized pouches which can be opened with just one hand for self application.

Its easy to use. There is no need to carefully measure or cautiously apply CELOX. The entire pack can be poured right into the wound and pressure applied. Its an emergency product that you can depend on to work when you really need it.

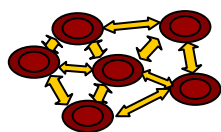

CELOX Industrial is now available online

How does CELOX work?

Pouring the CELOX into the wound prevents blood loss by forming a gel-like plug as the CELOX links to surface of red blood cells.

Because of its mode of action, CELOX has been

shown to clot blood:

- Very fast (30 secs).
- With anticoagulants like heparin & Coumadin.
- Hyperthermic (cold) blood.

CELOX has been tested in a controlled study on lethal arterial bleeding by the US Marines.

The superb results show:

- 100% of bleeds stopped,
- No re-bleeding,
- Excellent post treatment blood pressures.
- 100% survival.

Details of all these tests are available at:
